O Gauge Stone harbour Wall 144mm wide by 70mm high

**Ready assembled** harbour wall section with rebated support pillars. Interlocking stonework to avoid unsightly straight edge joins. **Self supporting wall stands up on it's own**

Support rebate is designed to take a piece of ply or MDF with enough space to ensure track can be made flush with the top of the wall.

Support height can be adjusted by shimming or filing. Can be cut to length and modified with a junior hacksaw and files.

To join sections or make repairs you can use PVA or filler material. Note: For external use you must use acrylic gel/paste as PVA is not water resistant.

**Painting:** Acrylics are easiest but solvent based paints will also work. Test paints on the rear of the sections first.

**External Use** This product is suitable for external use if a few simple rules are obeyed:

- (1) Use Acrylic gel/paste to join sections as PVA is not waterproof
- (2) Ensure the structure is completely painted and sealed
- (3) Most importantly, ensure that the structure is either completely filled with no voids or has large drain holes to prevent water accumulating. If water does get collect inside the structure it will expand when it freezes and cause fractures.
